

after redirect sub folder ... getting 404 error

Inviato da nuguyaa - 23/06/2011 02:57

I'm looking for a solution which can redirect sub folders within SEF activated website.

One joomla site has got SEF activated so its url look like this.

<hostname/shows/specials/article-name>

Then my client wants it to look like <hostname/specials/article-name>.

So what I need is sub folder redirection rather than page by page.

(just make the url looking different)

This structure is from *mainmenu and if I change the main menu structure then many other things will break. Also there are several sub folders that the client wants to be looking different.

So I installed ReDJ and add redirection item as below.

From URL: /shows/specials/

To URL: http://{siteurl}/specials/{pathltrim /shows/specials/}

then the url it shows is what I desire, however, the page does not link to the right item and only showing 404 error.

Hi,

maybe the item should be:

From URL: ^/specials/

To URL: http://{siteurl}/shows{path}{queryfull}

Let me know,

Luigi
