301 redirect
Inviato da Joey - 26/10/2011 21:50

_____

Hi there,

I have installed ReDJ and it has worked well for quite a while. However, today I was using the component to setup a 301 redirect on our site. This redirect used component/user.html in the url and redirected back to our Homepage. Now I cannot login to the back end of Joomla. The admin name and password don't get rejected but instead it redirects to administrator/index.php and I can't login.

Please could you advise how I can remove this 301.

Hi.

First disable ReDJ plugin. Go to plugins table in the database, edit row system - redj and set enabled to 0.

If you need help send me an email at info(at)sistemistica.it.

Luigi
