

Special URL redirect Problem

Inviato da Ludt - 02/01/2012 14:53

Hello,

i have a problem with a unique URL structure that i cant seem to redirect(404 error).

FROM: host/de_test_test_company.Company?ActiveID=4589

TO: host/de/test.html

the problem seems to be lying with the .Company?ActiveID=4589 since following works:

FROM: host/de_test_test_company

TO: host/de/test.html

The ?is Escaped in the Rule.

The ActiveID makes no difference in the Result.

It seems the redirects do not like the .Company

Any help on this problem is greatly apreciated.

Hi,

it could be a problem related to rule's order (i.e. a rule that also matches with your URL and with a lowest order).

To solve fast, please, send me a dump of redj table at info(at)sistemistica.it.

Best regards,

Luigi

Unfortunatly this didnt fix the problem.

sent you another email

Jeremy

The problem is that the error page is provided directly from Apache. No way for Joomla / ReDJ to do something.

To avoid this, you should add this row at the end of .htaccess file:

ErrorDocument 404 /

If your Joomla site is installed under /joomla folder, than use this:

ErrorDocument 404 /joomla/

Problem solved before to go home... 

Best regards,

Luigi
