

Strange problem

Inviato da Aleistere - 13/02/2012 09:46

Hi, thank you for component, it's very useful!

Installed, all working fine. But! Something strange happened with module manager, I cannot change module positions for existing modules nor can't choose position for new module.

I've tried to unpublish ReDJ, but it not helps. Any suggestion? TIA

Joomla 1.7

PHP 5.2.5

MySQL 5.0.26

Hi Aleistere,

sorry but I don't understand the problem, because ReDJ has just a system plugin and a backend-only component to manage redirection rules.

Could you, please, try to explain what happens with more details? Moreover, you can add a screenshot or something I could check...

Thanks,

Luigi
