Need to ADD a directory to a bunch of pages
Inviato da globalawakening - 22/02/2013 15:00

_____

I modified something on our site and broke a bunch of zoo category links.

The originals were like this:

globalawakening.com/testimonies/category/brazil-december-2012

The new ones need to be like this:

globalawakening.com/testimonies/written-testimonies/category/brazil-december-2012

And I'm just stuck on this. I've looked and looked through the forums and just can't seem to find the right string to do this.

thanks!

_____

Aha! I read some more and ended up with this:

from: ^/testimonies/category/

(I had had that part already)

to: http://{siteurl}/testimonies/written-testimonies/{pathltrim /testimonies/}{queryfull}

So it's just trimming the testimonies part and then putting it back with another directory in it. IT WORKS.

_____

I like it when problems are solved, even more when this happens without my intervention ...

Kind regards,

Luigi
