

## Using Joomla 2.5 rredirect with ReDJ

Inviato da madmaxy007 - 09/09/2013 16:52

---

Hi,

im using this great component for my 404 sites. Im using the current version of Joomla 2.5.14 and managed the 404 pages with the core component "redirect";.

The problem was, i had to manage all 404 pages manually. With the reDJ plugin i redirct all 404 pages to the index.html. (!!!!redirect all errors is enabled !!!)

My question now, is it possible to use the old joomla core 404 redirects? Because at the moment all 404 pages will be redirected to the index.html, even if a special 404page is in the joomla core redirect component is available.

thx in advance

I'm not sure how standard redirect plugin works, but try to change system plugin orders and put redj AFTER redirect.

If this not works, you should create custom redirections, you could do with ReDJ... 😊

Kind regards,

Luigi

P.S. Pls, for the future, move on [www.selfget.com](http://www.selfget.com).
