

## newbie user here hoping to get home page tags work

Inviato da yogabear - 08/02/2010 22:45

---

Hello,

I know I must be close to getting this working, because I have tried about 50 times, but perhaps you can give me a little help. No matter what, I cannot seem to get the tags coming up on my home page. Here are my settings - see attached pic.

thank you.

Craig

Hi and welcome,

please, attach plugin settings, and send me a dump of Tag Meta table.

We'll solve in a while...

Luigi

Hi, thank you for offering us a great comp and great support.

I installed the comp and read and search about how to get make this comp working, but still didnt understand.

I have a url [fulloflifeokc.com/index.php/home](http://fulloflifeokc.com/index.php/home) and wanted to cooperate with this component.

I installed everything and enabled the plugin also.

I changed my htaccess.txt to .htaccess

I wrote on a URI: ^/home/?\$ this for [fulloflifeokc.com/index.php/home](http://fulloflifeokc.com/index.php/home). Is that how I should write?

It is still not working. Maybe I am doing something wrong.

please help me to solve this.

Thank you.

Hi,

about the .htaccess file, is not strictly necessary for Tag Meta to work.

About your URL, if you configure an item as follow:

URI: ^/index.php/home\$

This match exactly with (and only with):

<http://fulloflifeokc.com/index.php/home>

Let me know,

Luigi

Thank you for your quick response.

I followed your code. and cleared my browser's cache and my website domain address is still showing [f](http://fulloflifeokc.com/index.php/home)

After the changes what should my url will be if proper work done?

Thank you,

=====

Sorry,

but I don't understand when you say:

After the changes what should my url will be if proper work done?

With Tag Meta the URL don't change, you just can add meta tags information. What do you need exactly?

Let me know,

Luigi

Thank you for your reply, it worked after your suggestion.

I thought, it would change my current url to url with .html
