

Tags not working

Inviato da Gathering Moss - 02/03/2010 17:57

Hi, sorry to ask this again. I've read all the threads about the same subject but it's just not working for me.

I've created a very simple website, 4 pages including a front page. The installation worked fine and I got the front page to show the metatags in the code (using ^/\$ in the URL), but none of the other pages will work.

I've attached a copy of the database dump (only 3 of the 4 pages completed).

Thanks for your help in advance.

Tags not working

Inviato da Gathering Moss - 02/03/2010 18:10

Hi, apologies for bringing this up again. I've read through all the threads but it's still not working for me.

I've built a very simple website consisting of 4 pages, including a front page. The installation went well, I got the front page metatags to work and show on the code (using ^/\$), but none of the other pages show the tags. I've tried every iteration of the how the URL should look (full URL, /xx, ^/xx\$, etc) but the tags don't show up.

Enclosed is the database dump. Can you please take a look and throw me hint?

Many thanks **I file di questo Forum sono invisibili ai visitatori. Prego accedi o registrati per visualizzarli.**

Hi,

could you send me the address of your site for some tests?

If you prefer send me an email (address in menu "Contattaci" on the left).

Luigi

I am having the same problem. Everything seems right, and I have read all the threads but it just won't write the tags. I have sh404sef installed on my site, and I have made sure the Tag plugin is sequenced after sh404sef.

Please advise how to troubleshoot. My website is in my e-mail you have on file, and a sample site where I have an active tag is "/background-history/company-background.html". I have tried Mode REDIRECT on and off.

Please help.

Could you, please, send me dump of Tag Meta table?

I need to check how items are configured.

Regards,

Luigi
