

## Tag Meta stopped working after upgrade of sh404sef

Inviato da phildegruchy - 28/09/2010 16:52

---

Hi there,

I've been using Tag Meta for a couple of weeks now. After searching loads of meta plugins it was the only one that worked for my VirtueMart Product Type filter. I was using it to place page title meta on URLs that I had manually shortened using sh404sef. I recently noticed that the meta titles are no longer showing as those that are set in the Meta Tag component but showing the meta of the parent menu item. An example page is:

<http://www.onespecs.co.uk/alexander-mcqueen-glasses>

I have made reordered my plugins so that Tag Meta is the last to run as suggested, however, still nothing. As well as sh404sef, I also use iJoomla SEO. All seemed to be working fine until recently. The only thing that I can think may have changed things is that I upgraded to the latest version of sh404sef (2.1.4.734) however I have the meta part of this component switched off.

Any help appreciated as this is doing my SEO no good what so ever! I am happy to supply a test log in if this will help diagnose the problem.

Many thanks,

Phil

Hi,

sometimes I have encountered problems with sh404SEF but I can't tell nothing without check into backend. Have you a test environnement where I could login to check settings? Could be possible to clone the site under a subdirectory?

Regards,

Luigi

Hi Luigi,

Thanks for the quick response. I have possibly found another way to achieve the required result. I'll experiment with that and get back to you.

Thanks,

Phil
