Can't seem to get TagMeta Working (Joomla) -

Inviato da multijamma - 10/10/2010 17:24

_____

I have TagMeta installed correctly. My website is www.multi-jamma.com - I am trying to add meta tags for each of my product pages.

 For example:

 the 60 IN 1 PCB page url is: www.multi-jamma.com/joomla/index.php?option=com_virtuemart&page=shop.product_details&flypage=flypage.tpl&product_id=58&Itemid=53

So this is how I have the URI in TagMeta:

^/index.php?option=com_virtuemart&page=shop.product_details&flypage=flypage.tpl&product_id=58&Itemid=53$

I have typed in the key words ect and saved - when I go to the page, I still only see my meta's from the global config in joomla

Any help would be great!

Thanks for your time,

Kyle W.

_____

Hi,

item seems correctly configured. Could you please send me an email at info(at)sistemistica.it with a dump of Tag Meta table and a screenshot of plugin settings? Also a list of all plugin enabled could help (remember to set Tag Meta as the last one in system ordering).

For a fast solution you could provide me an access to your test environement backend.

Regards,

Luigi
