

## Tag Meta and Home Page

Inviato da awedge - 11/05/2009 15:28

---

Hello,

I am using Joomla 1.5.9 and Tag Meta Version 1.1 it has worked very well and easy on all my pages except my home page.

I have changed URL to index.php, index.html and [www.fullforceoutdoors.com](http://www.fullforceoutdoors.com) nothing seems to work.

I turned off meta in Joomla Global Configuration and that did not work on or off.

Is there something I am missing or a setting I need to change in Joomla to get meta in home page?

Hi,

Joomla! default home is /index.php, so try adding these two entries:

URI 1:

^/\$

URI 2:

^/index.php\$

Please, remember that Tag Meta plugin should be the last one to touch page meta info, so be sure there aren't other plugin that do something like this with order greater that Tag Meta (filter all your system plugin and look at order).

Let me know.

Regards,

Luigi

Worked just fine.

I used ^/index.php\$ as URL

and yes had to move tag Meta in order of system plugins.

Thank you very quick response and great plugin. Worked like a charm once I knewe what I was doing...

Thanks to you for using Tag Meta.

Enjoy it!

Luigi

Hi Luigi!

I am not sure if what I am doing is correct. I already have Tag Meta installed but it does not seem to be working.

I tried the stuff that you have advised the other posters but I could not seem to get things work.

I am working on YenomGadgets.com. I am not a tech-ie person. I am using Joomla 1.5. I turned Joomla SEF and ARTIO JoomSEF off and Tag Meta already ranks higher. Here's what I am doing:

Details:

URI: [yenomgadgets.com/index.php?page=shop.product\\_details&category\\_id=184&flypage=flypage.tpl&product\\_id=64&option=com\\_virtuemart&Itemid=71](http://yenomgadgets.com/index.php?page=shop.product_details&category_id=184&flypage=flypage.tpl&product_id=64&option=com_virtuemart&Itemid=71)

Published: Yes

Title: HP Pavillion DV2

Description: Core™ 2 Duo P7450 (2.13GHz)

4GB Memory and 500GB Hard Disk

NVIDIA® GeForce™ GT 130M (1GB)

16.0

Keywords: laptops, good deal, electronic deals, cheapest laptops, cheap laptops for sale, brand new laptops, laptops from the U.S.A., HP, Compaq, Dell, Toshiba, Asus, Acer, computer shop, good laptops

Hi,

for this URL:

[yenomgadgets.com/index.php?page=shop.product\\_details&category\\_id=184&flypage=flypage.tpl&product\\_id=64&option=com\\_virtuemart&Itemid=71](http://yenomgadgets.com/index.php?page=shop.product_details&category_id=184&flypage=flypage.tpl&product_id=64&option=com_virtuemart&Itemid=71)

Your item MUST be as follow:

```
/index.php?page=shop.product_details&category_id=184&flypage=flypage.tpl&product_id=64&option
=
com_virtuemart
&
Itemid
=
71
```

This is because you need to escape question mark (it can be done putting a backslash behind).

Let me know if this works,

Luigi

Hi,

I have the same problem in that the Meta Tags work with all my pages expect for the home page.

Ive tried inserting into the URI tag:

```
index.php
```

```
^/index.php$
```

```
^/$
```

Nothing works - ive also made Meta Tags the last to update in the plugin section

Any ideas?

Rich

Hi,

I need the dump of Tag Meta table, a screenshot of plugin settings and one with the list of all active plugin, and the real url of your site to make some test.

If you prefer, send me a mail (you find the address in the left menu under &quot;Contattaci&quot;).

Regards,

Luigi
