

facebook open graph tags

Inviato da ppeer - 12/12/2011 11:54

Ha Luigi,

After using ReDj I've become interested in using Tag Meta too. Above all I like the macro's you can use to catch dynamic url's.

I am sure TAG Meta offers numerous advantages also. The only question which remains is: does it support the facebook open graph meta tags like e.g. [ITP Meta](#) does?

regards,

Peter

Great tip,

added to features wish list for the next release.

Cheers

Luigi
