

How to write keywords in Tag Meta

Inviato da karen444 - 30/07/2009 15:40

Hi!

I am a bit confused on how to write the keywords correctly in the Tag Meta Software, and this is really important because if will not be practical if I do it wrong.

You say not to insert spaces, but I do not understand what that means.

For example, one of my keywords is natural remedies for dogs. How would I write it in your software?

- 1) ... , natural remedies for dogs, ...
- 2) ...,natural remedies for dogs,...
- 3) ...,naturalremediesfordogs,...

Please specify the correct way by 1, 2, or 3. Or please give me an example.

Thank you,

Karen

Absolutely number one is the correct way.

If I say "don't put space" I must refer to "space after comma",. So use this:

key1,key2

And not this:

key1, key2

But this is just a "because really don't matter.

Regards,

Luigi

So, if no space after comma, then number 2 is correct.

Thank you,

Karen

Oops,

you are right. My mistake to say:

Absolutely number one is the correct way.

Better to say that 1) and 2) are correct, but 2) is better. It's clear that 3) is completely wrong. 🙄

Regards,

Luigi

Hi!

I've done what I think should be correct but it does not work at all.

Does your extension work on Joomla 1.5.10 or 1.5.11?

Also here is an example of url I typed:

/cushex-drops-dogs-cats-adrenal-glands.html

And then I wrote in the title, description and keywords.

But the global configuration metadata is still in place and not what I want it to be.

What did I do wrong?

Thanks,

Karen

Hi,

Tag Meta works with all version of Joomla 1.5.

Have you enabled plugin? If yes, send me the full URL to test the meta tags.

Regards,

Luigi

The root url is www.allnaturalpetremedies.com

Thus far, I have only one page that I have inserted information for only
/cushex-drops-dogs-cats-adrenal-glands.html since I had previously uninstalled the extension.

I have installed both plugin and component and plugin, but I do not know if I needed to do something else. If so, I did not do it.

Awaiting your news,

Thanks, Karen

First, check that plugin is enabled.

Then, send me the export of your Tag Meta MySQL table (name is jos_tagmeta).

Hi!

Finally, it works. The plugin was not activated. I did not understand what "Activate plugin 'System - Tag Meta' and set global parameters" mean. I wish that I would have known sooner.

Maybe, as a pointer, maybe say that to activate the plugin go to Extension - Plugin Manager and Activate plugin System - Tag Meta.

Thanks for your help. This extension is a great help for me!

Sorry for the inconvenience.

Karen
