

TagMeta Error - PHP Notice: Undefined property:

Inviato da Woods - 22/10/2009 19:30

Having installed both the component and plugin, setting up the plugin parameters and performing just one meta rewrite, I receive the following error when I click on the items page(/administrator/index.php?option=com_tagmeta):

PHP Notice: Undefined property: stdClass::\$catid in

E:\inetpubnew_wwwroot\joomlaadministrator\components\com_tagmeta\viewstagmeta\tmpldefault.php on line 165

PHP Notice: Undefined property: stdClass::\$catid in

E:\inetpubnew_wwwroot\joomlaadministrator\components\com_tagmeta\viewstagmeta\tmpldefault.php on line 166

Obviously this means I can't access the interface and add and more URLs. Looking at the code, it's obviously got something to do with pagination. These are lines 165 and 166 respectively:

Thanks

Haven't you received the alpha preview into your mailbox?

Tell me if I must resend it.

Regards,

Luigi
