

## Weblink and TagMeta

Inviato da amirbashan - 31/12/2009 08:29

---

Hi,

I have a problem with a weblink component.

The web link component manages the page /resource.html.

I was trying to use metadata for this page without success I always get the global setting although there is no item for / in the table..

I am able to show meta for e.g. /resource/xxx.html which is an article.

Currently I have only these 2 items to allow testing.

What could be the reason for this?

Amir

Hi.

Could you please send me a dump of your Tag Meta table? I need to see how items are configured.

Regards,

Luigi
